

Blue Marble Extends Analytical Services Through Cutthroat Laboratories

Blue Marble continues to lead in innovation services by expanding their expertise in analytical services to any size business through Cutthroat Laboratories.

MISSOULA, Mont. (PRWEB) February 01, 2018

After over a decade of conceptual continuity in sustainable product development, Blue Marble (Biomaterials) is continuing to innovate by expanding its collaborative network through the development of Cutthroat Laboratories. This spin off is designed to offer global quality services to small and medium sized organizations through excellence in analytical, scientific services, and regulatory assistance. Cutthroat Laboratories provides global connections along with quality and product development services to organizations that might not have been able to traditionally find or afford such services. These organizations now have access to a robust and skilled team used to working with fortune 500 companies on a global scale.

In partnership with a diverse network of businesses, Cutthroat Labs has begun to facilitate food safety, science, and product development within the entrepreneurial ecosystem Blue Marble continues to build outside of traditional innovation hubs. "The team that formed Cutthroat Labs has proven their expertise and capabilities on the global stage through Blue Marble, and the time is right to offer these capabilities to other organizations, innovators, and the people who can benefit from this," said Mr. Stephens, CEO of Blue Marble Biomaterials.

"The world of regulatory compliance and product development has become increasingly complex, and while it seems daunting - our team is dedicated to providing the scientific integrity and guidance to provide more than just a food or product testing laboratory for our clients and partners, the sky is the limit on what we and our partners can accomplish", Ashley Sherman, Senior Analytical Chemist of Cutthroat Laboratories stated.
